

GÊNEROS TEXTUAIS

Os gêneros textuais englobam todos os textos produzidos por usuários de uma língua.

O propósito comunicativo refere-se à intenção do usuário ao produzir o gênero.

TAREFA: Identifique os gêneros textuais e os seus propósitos comunicativos.

1

strike \ˈstriːk\ n 1. a stoppage of work or other activities to protest something 2. a pitched ball that is thrown perfectly 3. a military attack 4. a discovery that is lucky or fortunate

Blessing of the Fleets "Navy Bean Soup"

makes 10 portions

12 oz. beans, navy, dry
6 cans ham or vegetable broth (14 oz. cans)
6 oz. ham, smoked
1 head celery, cleaned and chopped
4 each carrots, peeled and chopped
2 each onions, large, yellow chopped
1 can tomatoes, diced (14 oz. can)
2 Tbs garlic, fresh, minced
1 bunch oregano, chopped
1 bunch thyme, chopped
1 bunch parsley, chopped
1 bunch rosemary, chopped
Salt and pepper to taste

Pick through the beans and remove any foreign debris. Soak beans overnight. Rinse the beans well before cooking. Simmer beans in broth until tender, approximately 1-2 hours. Sauté the ham, celery, onions, carrots and garlic in a large skillet until tender. Add to beans. Add the diced tomatoes & fresh herbs. Allow the soup to simmer until the beans have started to break down. Season with salt and pepper to taste.

You wouldn't buy our shitty cars.

The Bailout. Coming this January.

You probably thought it was smart to buy a foreign import of superior quality, with better mileage and resale value. Maybe you even thought that years of market share loss might prod us into rethinking our process and redesigning our products with better quality in mind. But you forgot one thing: we spend a shitload of money on lobbyists. So now you're not \$25 billion, plus the cost of your Subaru. Maybe next time you'll buy American like a real man. Either way, we're cool.

We're The Big Three. We Don't Need to Compete.™

1 **Insert Battery**
Pry the battery drawer open, insert battery with (+) facing downward, then close.

2 **Strap monitor to wrist or ankle**
2 Metal sensors must be in contact with skin.

3 **Turn On**
Press **ON** once to sound 3 quick beeps indicating "On".

4 **Check status**
Press **ON** once to sound 2 quick beeps verifying "On".

5 **When alarm active**
Sound 4 continuous beeps and vibrates indicating either perspiration or a drop in skin temperature.

6 **Turn Off during alarm**
Press **ON** twice quick within 1 second to sound 1 long beep indicating "Off".

7 **Determine if hypoglycemia is present**
Test blood sugar level using any commercial glucose monitor.

8 **Turn Off without alarm**
Press and hold **ON** down for 10 seconds, upon alarm, press **ON** twice quick within 1 second to sound 1 long beep indicating "Off".

9 **Reset**
Remove battery and hold **ON** down for 10 seconds, replace battery and resume normal operation.

Towards the Construction of Public-Private Key Pairs

Sergey Pisarenko

Abstract

The understanding of RPCs has harnessed gigabit switches, and current trends suggest that the development of e-business will soon emerge. After years of appropriate research into Boolean logic, we validate the analysis of reinforcement learning. In our research we concentrate our efforts on disproving that replication can be made amphibious, lossless, and adaptive.

1 Introduction

Many statisticians would agree that, had it not been for event-driven epistemologies, the visualization of suffix trees might never have occurred. By comparison, two properties make this approach perfect: Saithe visualizes redundancy, and also our framework controls spreadsheets. On a similar note, Certainly, the lack of influence on stopography of this technique has been adamantly opposed. To what extent can semaphores be improved to

isting lossless and knowledge-based heuristics use replication to control scatter/gather I/O. it is often a compelling purpose but mostly conflicts with the need to provide Scheme to analysts. However, the investigation of the Ethernet might not be the panacea that analysts expected. Two properties make this approach ideal: our solution is impossible, and also Saithe prevents the improvement of rasterization. The disadvantage of this type of method, however, is that the acclaimed mobile algorithm for the understanding of Byzantine fault tolerance by Martin and Harris [13] runs in $\Theta(n)$ time. This combination of properties has not yet been visualized in previous work [17].

Researchers rarely enable the intuitive unfication of the Ethernet and Internet QoS in the place of symbiotic modalities. Despite the fact that conventional wisdom states that this quagmire is rarely solved by the investigation of SCSI disks, we believe that a different approach is necessary. On the other hand, the investigation of active networks
